In this paper the design analysis begins from the distillation column, by collecting data s such as the vapor liquid equilibrium of the mixture and the physical properties of the mixture from chemical engineering handbooks [Perry].The McCabe Thiele method is used to determine the number of theoretical stages by plotting the operating and stripping line .The column diameter, perforations and tray spacing also designed. Next, the heat exchanger design was done (U-tube) for heating purpose. By using a steam as a heating media and the type of material of construction, tube side and shell side pressure drops, generally thermal and mechanical designs is done.
