By Theodore Kautny

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Autogenous Welding and Cutting The literature of autogenous welding technique has been enriched lately in many valuable ways, and there exist a large number of works which cover this field. Autogenous welding is a process intended for general introduction both in small workshops and in large factories. The range of welding technique is so wide that a thorough study of the process requires extensive research which makes great demands on the time of the reader. A pocket book of brief compass will be welcome to the works engineer, to the works foreman, and to the practical autogenous welder; in which the most important elements of the process are placed together in an easily available manner, and which shall be a faithful companion and a reliable adviser in connection with the various questions arising in practice. The object of the present work is to meet these requirements and I pass it on to the general public in the hope that it will be favorably received and fulfil its task.
